ISipnayan; Kids Learning Web App
Business Model & Platform Strategy

1. Business Model Canvas

Customer Segments

- Primary: Grade 2–3 students who need help with mathematics
- Parents/guardians looking for supplementary learning tools
- Elementary school teachers who want reinforcement tools for students

Value Propositions

Students:

- Personalized and gamified math learning experience

Parents:

- Affordable and convenient supplementary learning at home

Teachers:

- Curriculum-aligned math reinforcement and student progress insights

Revenue Streams

- Monthly subscription from parents
- Social Media Engagement

Key Resources

- Web application platform
- Adaptive learning algorithm
- Math learning content
- Development team
- Cloud hosting infrastructure

Key Activities

- Developing and maintaining the web platform
- Creating math learning content and exercises
- Improving the adaptive learning system
- Marketing and outreach to parents and schools
- Monitoring user feedback and improving the platform

Key Partners

- Elementary schools and teachers
- Curriculum specialists
- Cloud service providers
- Department of Education (DepEd)

- Tutoring centers

Channels

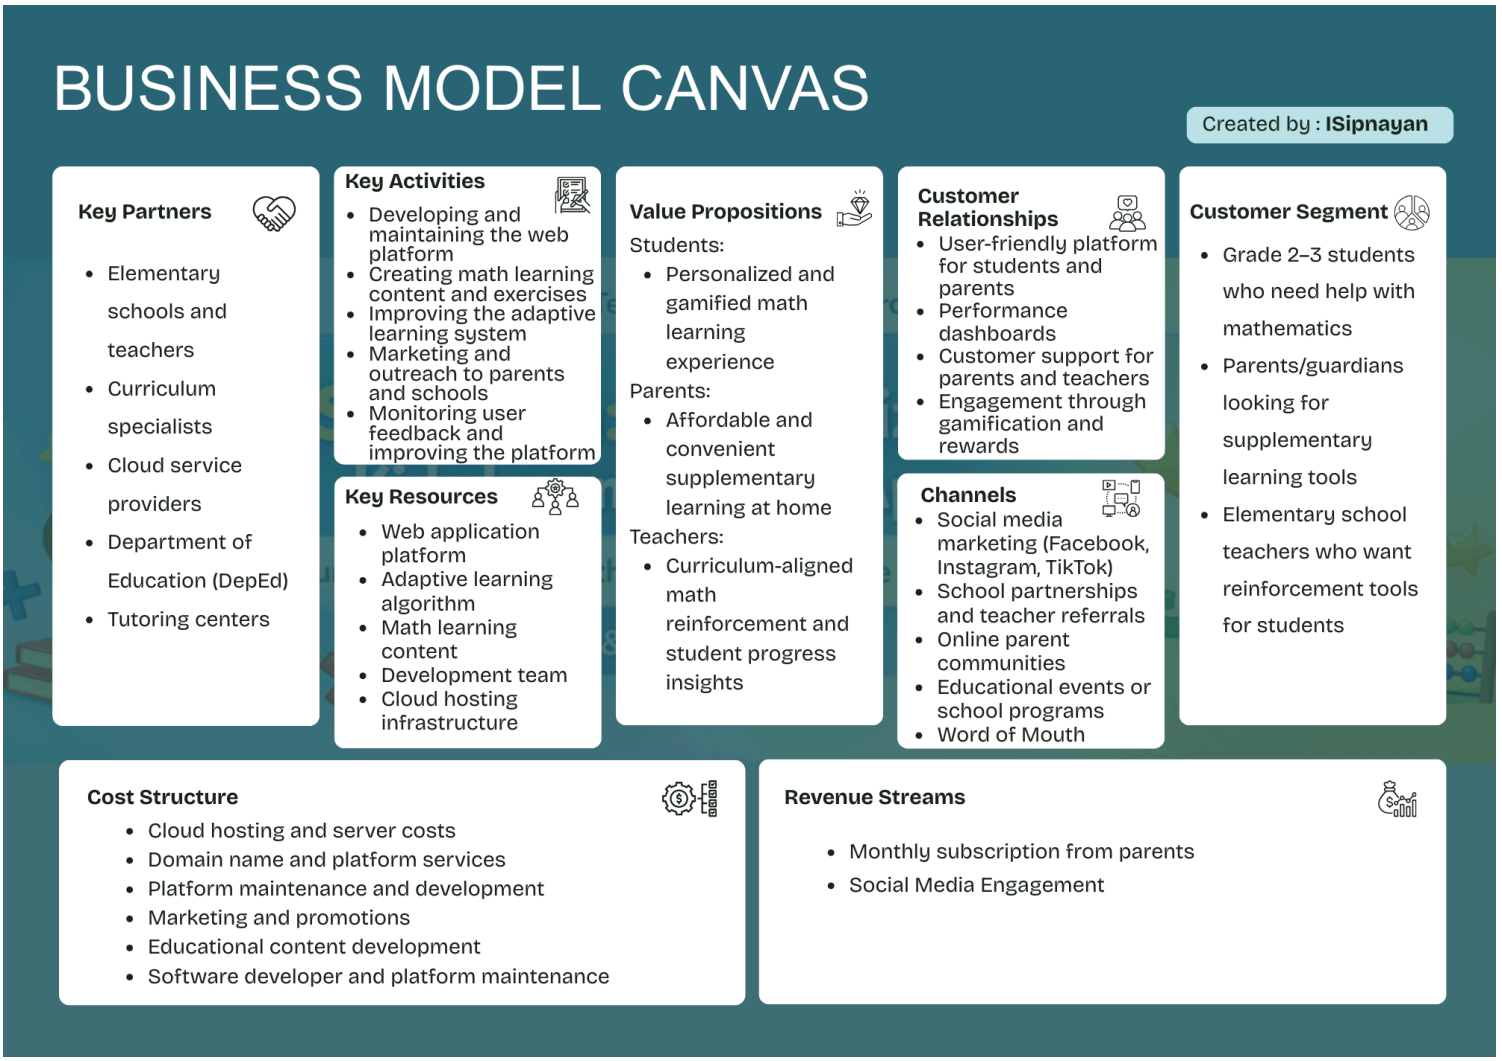
- Social media marketing, such as Facebook, TikTok, and Instagram, targeting parents
- School partnerships and teacher referrals
- Online parent communities
- Educational events or school programs
- Word of mouth

Customer Relationships

- User-friendly platform for students and parents
- Performance dashboards
- Customer support for parents and teachers
- Engagement through gamification and rewards

Cost Structure

- Cloud hosting and server costs
- Domain name and platform services
- Platform maintenance and development
- Marketing and promotions
- Educational content development
- Software developer and platform maintenance



2. Cost Structure

The estimated operational costs for developing and maintaining the iSipnayan platform are presented below:

Cost Category	Estimated Cost (Per Year)
Cloud hosting and server infrastructure	₱10,000 – ₱15,000
Domain name and platform services	₱1,000 – ₱2,000
Software developer and platform maintenance	₱60,000
Educational content development	₱15,000
Marketing and promotions	₱10,000
Estimated Total Cost	**₱96,000 – ₱102,000**

3. Platform Strategy

ISipnayan is a digital learning platform designed to help Grade 2–3 students improve their mathematics skills through personalized, gamified learning experiences. The platform connects students, parents, and teachers by providing adaptive math exercises, short learning sessions, and progress monitoring tools.

For the launch strategy, the platform will initially target parents of Grade 2–3 students seeking supplementary learning support at home. Early adoption will be encouraged through teacher recommendations and partnerships with elementary schools. As the platform grows and attracts more users, marketing efforts will expand across social media platforms, parent communities, and, later on, collaborations with educational institutions, including the Department of Education (DepEd).
